- Response codes are indicated in parentheses.
- In questions where a single answer is possible, choices appear with a circle “O”.
- In questions where multiple answers are possible, choices appear with a square “□”.
- Text shaded in grey provides additional indications that were not shown to the respondents.

## Master data (from Intervista)

These variables are available for respondents who were not screened out (**screen** = 1 or 2).

|              |   |
|--------------|---|
| <b>age</b>   | <p>Respondent's age (in years, Intervista)</p> <p>Because the evolution of age is not always consistent across waves, one might want to correct age and enforce consistency. This seems particularly important for longitudinal analyses. To this end, variable <b>age_corr</b> has been created as follows:</p> <ol style="list-style-type: none"> <li>1. For respondents with more than two waves: we check if two observations are consistent and adapt the other observations accordingly (if more than 3 waves, there might be several pairs of consistent observations; in such cases, the most recent pair is considered as being correct)</li> <li>2. For respondents with two waves only or for respondents with more than two waves but rule 1 does not apply: we consider the most recent observation as being correct and adapt the other observations accordingly</li> </ol> |
| <b>agegr</b> | <p>Age groups, used for quotas (Intervista)</p> <p>1 18-34 (target quota: 30%)<br/>                 2 35-54 (target quota: 40%)<br/>                 3 55+ (target quota: 30%)</p> <p>Variable <b>agegr_corr</b> (based on <b>age_corr</b>; see above) is also provided.</p>  |

Assume that you need to replace your fridge. You expect to stay in your current residence for another 10 years. In a shop you find the following two fridges which are identical in terms of size and cooling service:

|                                | Fridge A     | Fridge B     |
|--------------------------------|--------------|--------------|
| <b>Purchase price</b>          | 3,300 CHF    | 2,800 CHF    |
| <b>Electricity consumption</b> | 100 kWh/year | 200 kWh/year |

Assuming that one kilowatt hour (kWh) of electricity will cost about 20 cents on average during the next 10 years and that the value of 1 CHF in 10 years is the same as the value of 1 CHF today: Which of the two fridges minimizes your expenditure for cooling food and beverages during the lifetime of 10 years?

- The fridge for CHF 2,800 (1)
- The fridge for CHF 3,300 (2)

The order of the fridges in the table and the responses were randomized.

Before this question, respondents were divided in three groups (see variable **gr**, 80% in group 1, 10% in group 2, 10% in group 3, with representativity enforced at the group level using the same quotas as for entire sample):

- **gr = 1:** control group. No additional information.
- **gr = 2:** treatment group. A series of information pages was shown to respondents in this group.
- **gr = 3:** treatment group. An online calculator was available to respondents in this group.

**enlit8**

How did you reach your conclusion?

- I compared the lifetime energy costs of the two fridges (1)
- I compared the total lifetime cost of the two fridges (i.e. purchase price + lifetime energy cost) (2)
- I had problems making a choice, so I chose randomly (3)
- I compared the prices of the two fridges (4)
- I compared the electricity consumption of the two fridges (5)
- Other reason (6)
